Ada Example

Product manager for search and developer platforms

Lisbon, Portugal | ada@example.com | example.com/ada

PROFILE

Product manager who has led product teams for nine years, with twelve years in product across developer platforms, search and data infrastructure. I work with engineers and data scientists on relevance, and I read the results myself.

EXPERIENCE

Example Corp, Director of Product, Search Platform

- Product owner for the site search API used by 2,000 developers; moved the share of queries answered in under 200 ms from 71% to 93%.
- Led a team of eight across engineering, design and data.
- Set up weekly relevance reviews with the data team and a labelled set of 400 queries.
- Shipped semantic search using an off-the-shelf embedding model and measured it against the keyword baseline before release.
- Wrote the public API guidelines and ran the developer advisory group of fourteen customers.

Northfield Systems, Senior Product Manager, Data Platform

- Owned the ingestion and indexing roadmap for a managed data platform; cut onboarding from three weeks to two days.
- Introduced usage-based billing for the storage tier together with finance and engineering.
- Ran quarterly planning for three squads and coached two junior product managers.

Side project: Notes search

- Built a small hybrid search tool over my own notes with keyword and vector retrieval, and a test set of 120 questions.

SKILLS

Search relevance, embeddings, API products, developer experience, pricing, experimentation, SQL.
